Site communities management	RSM, CPM, CRM, SGT services

1. Description

A site community permits to link many sites in case of; for example, they are linked by WAN connexions. A community could be also used to link sites which have a common GTR.
The id or site code community is built-up $$ characters and 4 digits.

2. How to access ?

Site community management is available from the menu 'definition' then 'Site Community'. It is also possible to affect a site community in site add/modification form.

3. Site communities management rules

3.1. Site communities management from menu 'Definition'/'Site Community' :

Site communities management screen (Figure 1) permits search with criteria like site community code, site community name, connect type, or use information. The criteria 'Display archives' allows to display archive ones. The search results display sites communities with a 'Modify' button, to modify site community and a 'Delete' button to archive it. Theses options are for users RSM, CPM, CRM, SGT Services only.

3.1.1. Sites community modification:

Button 'Modify' (result of a search) is the access to site community modification form (Figure 2). Information of the form is the following:

Site Community Code: (Format = $$+ 4 digits), code automatically generated.
Site Community Name: (255 characters maximum)
Connect Type: Network typology of sites interconnexion
Use Information: Indication on community use (Example: Link identification between two sites to make an addition of incident period to calculate GTR penalities)
Comments:
Sites associated: This information frame indicates the site associated list. The site adding to a community is done by filling in a site code in the input area called 'Please fill a Site Code'. If site code exists, you have to click on 'Add this site' button to link it to the community.

When all information are completed, just click on 'Save' to save all modification.

3.1.2. Add a site community:

Add site community form is available from the site community search screen (Figure 1) with the 'Add Site Community' button. The add form is related to modify form. It is necessary to click on 'Add site' button to add site in site community. On the click, the site community is saved and you have to add sites like in the modification form.

4. Add a community from the add/modification site form:

From a site form, you must click on 'Manage Community'. After that you could affect community to this site by selecting a community on the left list and clicking on '-->>>' button. To remove a community, you must select an element of the right list and click on '<<<---' button. When your selections are done, you must click on the *'save'* button.
